

ELECTRIC WIRE ROPE HOIST

WORKS FOR YOU.™

TOP QUALITY PRODUCTS FROM A LEADING COMPANY

DONATI SOLLEVAMENTI S.R.L. OFFERS A PRODUCT IN LINE WITH THE MOST MODERN INTERNATIONAL STANDARDS.

Donati Sollevamenti S.r.l. was founded in Italy in 1930 and has since earned a leading position on the international market for lifting and handling equipment, with exports accounting for around two thirds of its total turnover.

Donati joined the MHPS (Material Handling & Port Solutions) segment of Terex Co. USA (www.terex.com) in 2011 providing additional exposure and support for Donati products on the world market. The advanced design and construction features of all Donati products, are the basis for the competitiveness and reliability of the entire range, which is suitable for all manufacturing industries and tertiary distribution.

Donati designs and manufactures its products in Italy, so its marketing mix is known for its vast range (standard and special solutions), excellent quality/price ratio, fast response and delivery; it is the ideal partner for bridge crane manufacturers, material handling integrators and distributors as well as service companies specialising in retrofitting/refurbishing.

If Donati is known on the market for its constant focus on customer satisfaction, its in-house priorities are the quality of processes, safety in the plant and the environment (and Donati is ISO 9001 - ISO 14001 - OHSAS 18001 certified).

Donati also complies with the provisions of Italian Legislative Decree 231/01 concerning the administrative responsibility of legal entities and companies (governing Compliance, and also Safety and the Environment).

DONATI'S LIFTING RANGE

The product range covers all aspects of industrial lifting always offering an unbeatable quality/price ratio along with a pleasing and professional design.

The DMK electric chain hoists for capacities up to 4,000 kg, jib cranes with manual and electric rotation, DRH electric wire rope hoists with capacities up to 50,000 kg, DSC channel profiles and DGP offset gear motors, all represent an affordable and safe solution in any situation.

The special configurations of each product and on request CSA homologation for DMK and DRH hoists, complete the range guaranteeing a solution to the most diverse and specific application needs.

DONATI SOLLEVAMENTI'S constant focus on customer satisfaction is aimed at establishing a long-term relationship, based on mutual respect and trust, thanks to the flexibility and prompt response of its organisation and direct and personal contact. The after-sales service is managed to provide prompt answers and solutions for spare parts, servicing and warranties.

ELECTRIC WIRE ROPE HOIST

DRH SERIES THE MOST RELIABLE AND SAFE WAY OF LIFTING

It guarantees maximum safety in hoisting up to 50,000 kg. The skill and experience in design and production, the quality of components used, the high technology employed in machining mechanical parts, in the finish and surface treatments as well as the EN ISO 9001: 2008 certified quality system which covers all of the company's activities, allow DONATI SOLLEVAMENTI to offer a product in line with the most modern international regulatory standards. The DRH electric wire rope hoist ensure wide range of uses, reliability over time and safety in all operating phases.

The special water-repellent paintwork, applied with a completely enclosed electrostatic process, guarantees durability and constant top performance.

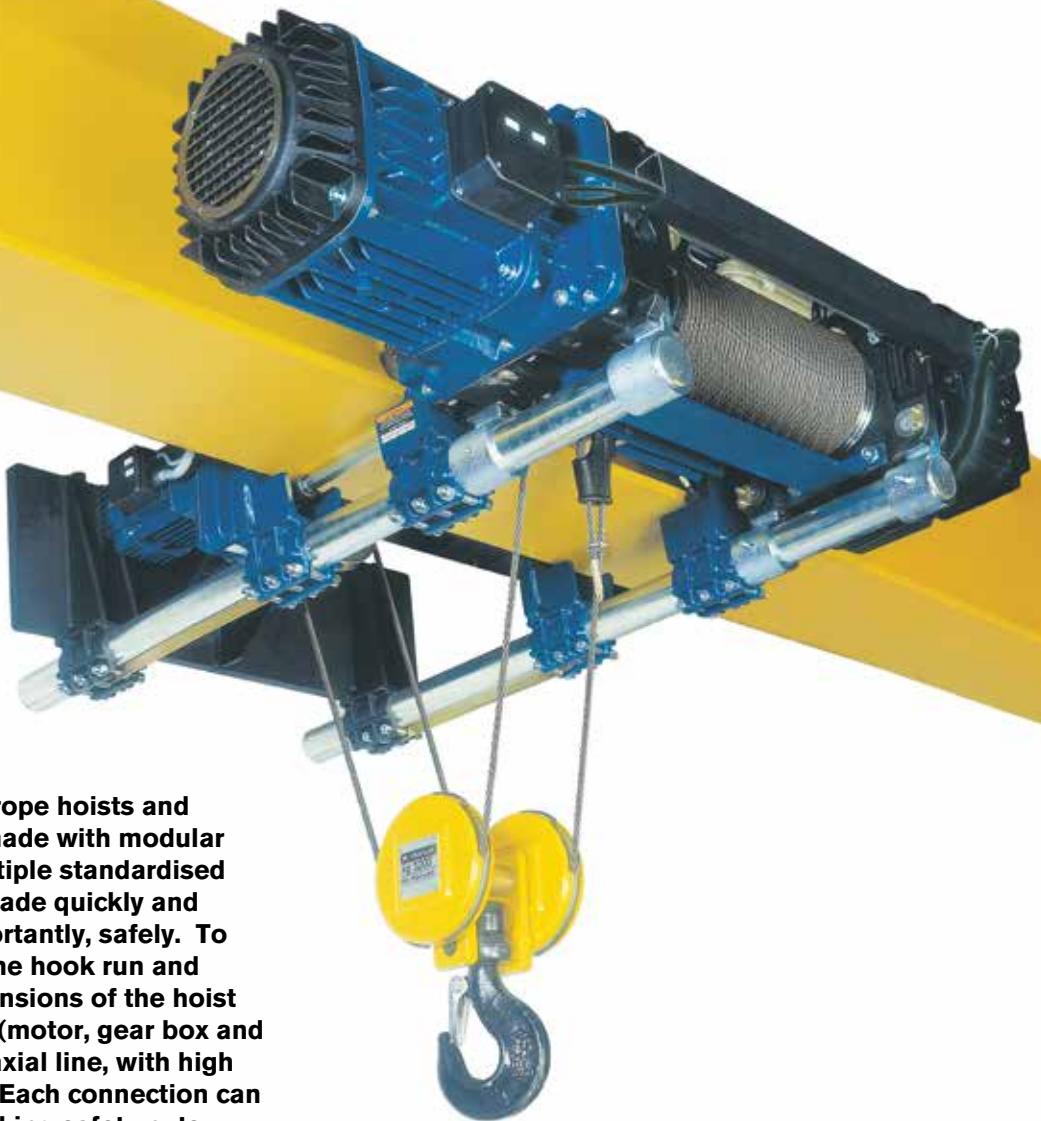

The company offers a 3-year warranty starting from the date of delivery, all with excellent value for money.

ELECTRIC WIRE ROPE HOISTS POWERFUL AND SAFE TROLLEYS AT YOUR SERVICE

The hoist combined with a trolley which runs on one or two beams also allows horizontal movements. All lifting (raise and lower) and traverse (right and left) movements are activated by a pushbutton panel or radio-control system. The electric wire rope hoist and trolleys can be mounted overhead and fitted with monorails or act as the lifting unit for other machines, including: cranes (bridge, gantry, job, etc.) monorail and double girder.

WORKS FOR YOU.

The DRH series electric wire rope hoists and relative electric trolleys are made with modular components. This allows multiple standardised or special executions to be made quickly and inexpensively, and most importantly, safely. To guarantee maximum use of the hook run and minimum overall lateral dimensions of the hoist body, the basic components, (motor, gear box and drum) are assembled in a coaxial line, with high strength bolted connections. Each connection can be inspected and has self-locking safety nuts.

The drum on the side opposite the gear motor can be connected (upon request) to a cycle counter, selectors, limits switches, encoders, etc. In addition, since it is perfectly symmetrical in the special execution with right and left threading, two gear motors can be installed doubling the lifting speed but maintaining the same capacity and vertical lifting axis. This solution is particularly suited for configurations with large hook runs.

The construction uses the most advanced technology and highly industrialised manufacturing processes to build totally reliable machines with economies of scale.

THE DRH SERIES ELECTRIC WIRE ROPE HOIST RANGE IS CREATED IN:

- ▶ **4 basic sizes**, DRH 1-2-3-4, for capacities from 800 to 50,000 kg, in the FEM (ISO) service groups 1Bm (M3) -1Am (M4) - 2m (M5) - 3m (M6).
- ▶ **One lifting speed** created with a 4 pole motor:
 - ▶ 8 or 12 m/min. for 2 falls wire rope hoists
 - ▶ 4 or 6 m/min. for 4 falls wire rope hoists
 - ▶ 2.7 or 4 m/min. for 6 falls wire rope hoists
 - ▶ 2 or 3 m/min. for 8 falls wire rope hoists

- ▶ **With 2 speeds** with 1/3 ratio created with a 4/12 pole motor:
 - ▶ 8/2.6 or 12/4 m/min. for 2 falls wire rope hoists
 - ▶ 4/1.3 or 6/2 m/min. for 4 falls wire rope hoists
 - ▶ 2.7/0.9 or 4/1.3 m/min. for 6 falls wire rope hoists
 - ▶ 2/0.7 or 3/1 m/min. for 8 falls wire rope hoists
- ▶ **5 standard versions with:** short (C), normal (N), long (L) or extra long (X1) and (X2) drum lengths, for hook runs from 4 to 58 m.

IN FIXED EXECUTION

This is the universal, basic configuration, with fixing eyebolts that allow any version of DRH hoist fixing on a frame or to be adapted in a suspended execution.

ELECTRIC MONORAIL TROLLEYS, TYPE DST/N/S

The DRH hoist is supplied in suspended execution with the normal trolley or articulated trolley for curved beams, it runs on a single beam and is operated electrically.

ELECTRIC MONORAIL TROLLEY, TYPE DST/R

In this configuration the DRH hoist is supplied in low headroom execution for maximum height of lift. It is compact and runs on a single beam; it is operated electrically.

DOUBLE GIRDER TROLLEY, TYPE DRT

The DRH hoist can be fitted longitudinally on the frame or suspended, or in transversal execution, on the trolley, which runs on two beams and is operated electrically. The two girder trolley execution allows the maximum hook run of the hoist.

PROTECTION AND INSULATION OF ELECTRICAL PARTS

- ▶ Hoist and trolley motors:
IP55 protection – "F" insulation class
- ▶ Motor brake IP23
- ▶ Limit switch: IP65 minimum protection -
Maximum insulation voltage 500 V
- ▶ Cables: IEC 20/22 II
Maximum insulation voltage 450/750 V

ELECTRICAL POWER SUPPLY

- ▶ DRH electric rope hoists are designed to be supplied with AC electrical current with three phase voltage: 400 V - 50Hz in accordance with IEC 38-1.
- ▶ Non-standard voltages and frequencies are available upon request.

NOMINAL WORKING CONDITIONS

- ▶ Operating temperature: minimum -10°C; maximum +40°C
- ▶ Maximum relative humidity: 80%
- ▶ Maximum altitude 1000 m above sea level
- ▶ The hoist must be installed in a well ventilated ambient, free from corrosive fumes (acidic fumes, saline mist, etc.).

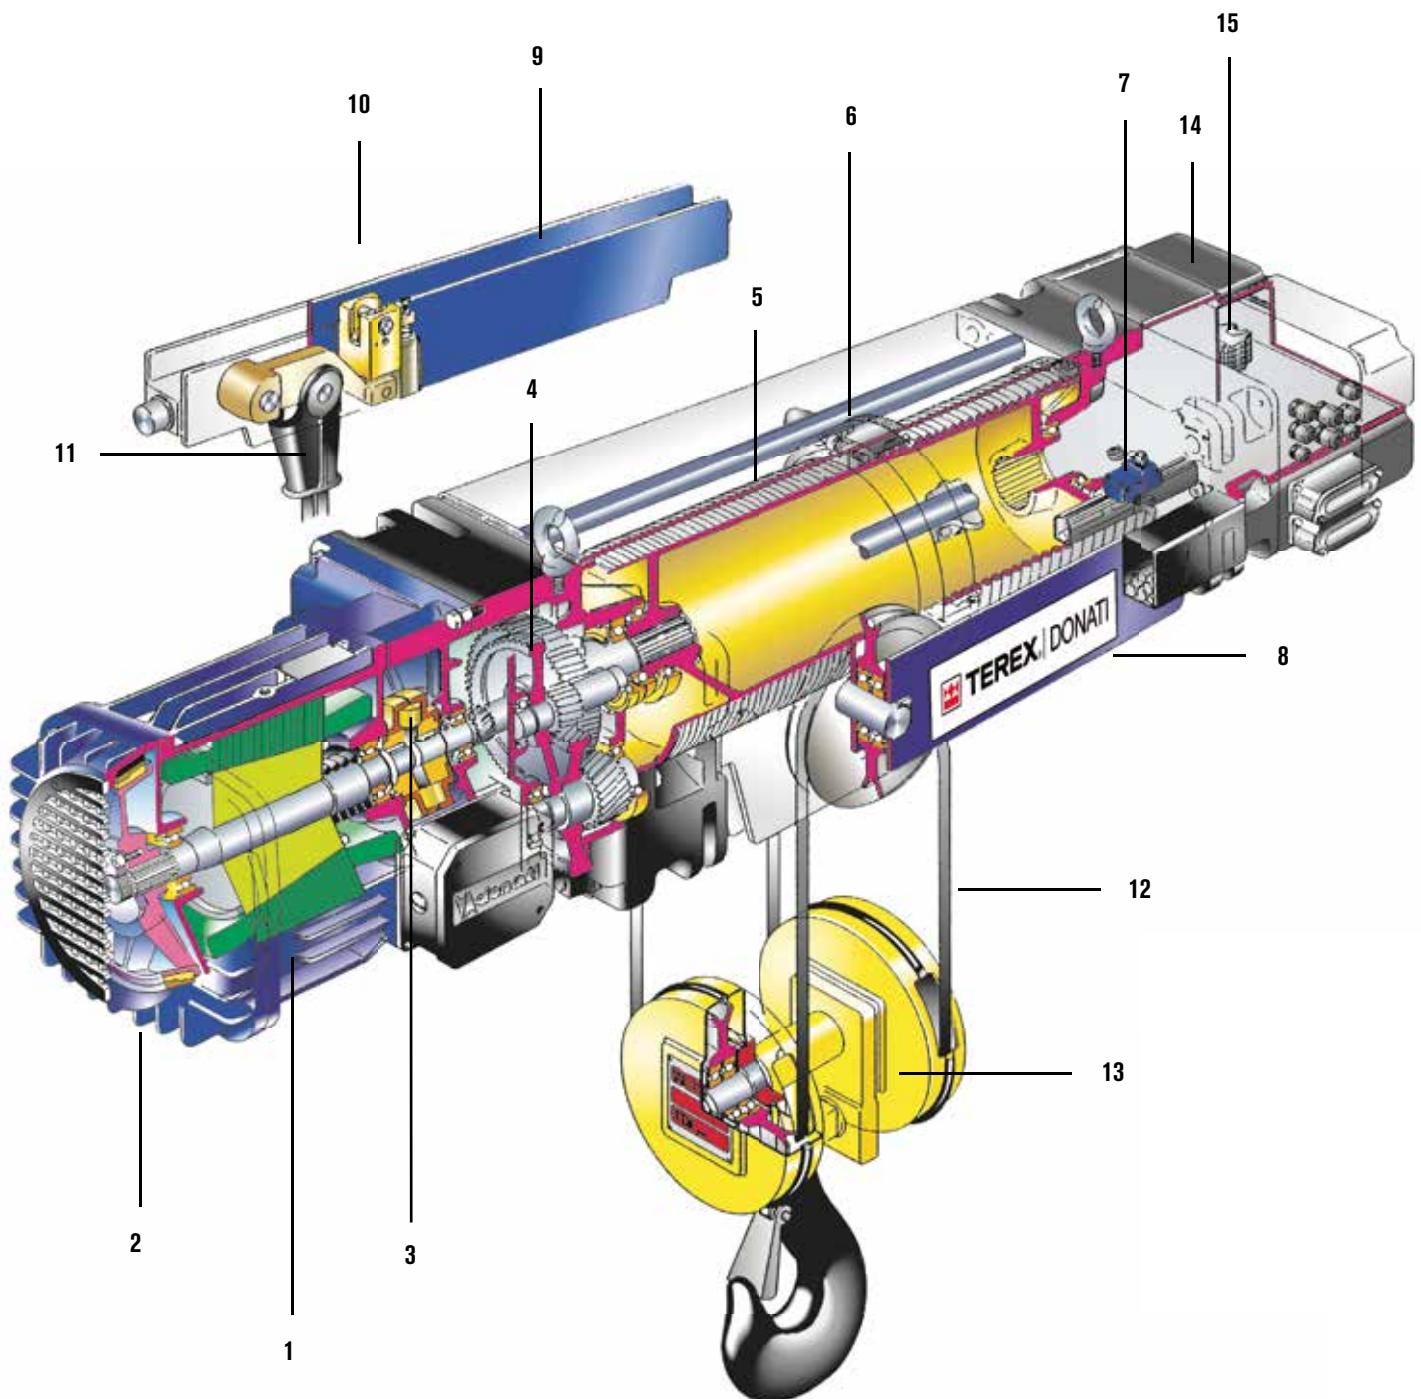

NOISE LEVEL

- ▶ The sound pressure level emitted by the hoist when fully loaded is always less than 80 dB (A). The incidence of environmental characteristics such as the transmission of sound through metallic structures, reflection caused by combined machines and walls, is not included in the indicated level.

WORKS FOR YOU.

THE HOIST IN DETAIL

DESIGN AND CONSTRUCTION

1. ELECTRIC MOTOR FOR LIFTING

- Asynchronous, three-phase, self-braking with tapered motor. Minimum protection IP 55 – Class F insulation. It has thermal probes for protection against overloading.
- DRH4 motor, 24 kW cylindrical, asynchronous and three phase.

2. LIFTING BRAKE

- The conical brake is fitted with asbestos free lining. The brake block, which has a fan that guarantees cooling of the brake and the motor, moves axially with the motor shaft and the braking function is activated automatically if the energy supply fails. [RES. 1.2.3 – 4.1.1.6 c) - Annex I Machinery Directive].
- DRH4 24 kW electromechanical brake.

3. COUPLING

This creates the connection between the self-braking motor and the gear box, allowing perfect axial sliding of the motor shaft.

4. GEAR BOX

Coaxial, with three stages of reduction, with cylindrical gears made of thermally treated, highly resistant steel, helicoidal teeth. Dimensioned and made to withstand the phenomena of stress and wear for life in relation to the normal FEM service group. [RES. 4.1.2.3 - Annex I Machinery Directive]. The whole machine is mounted on ball bearings lubricated for life in an oil bath.

5. DRUM

The drum in steel casing, is mechanically grooved and supported by the flange of the gear box and the equipment side flange, with hubs with rotating broached holes on permanently lubricated bearings. The drum is dimensioned based on the standards ISO 4308-1:2003 and UNI 9466:1994 as well as the FEM rules 9.661/86. The drum support flanges are fitted with steel cylindrical pins to secure the components which suspend and support the hoist. Mechanically machined seats support the anchorage crossheads and the return pulley. The connection between the two casings is made with bolted stay bolts.

6. ROPE GUIDE

This has a threaded ring made of spheroidal cast iron and allows excellent winding of the rope on the drum. [RES. 4.1.2.4 – Annex I Machinery Directive]. An elastic system automatically registers any play or wear. The rope guide is equipped with sliding backlash arms made of brass, which, by acting on the hoist stay bolts, function as raise and lower limit switches.

7. LIFTING LIMIT SWITCH

This is a safety component which limits the run of the hook, both raising and lowering, in an emergency. [RES. 4.1.2.6 a) - Annex I Machinery Directive]. It is composed of two precision microswitches which operate according to the “positive slow opening” principle and work on the auxiliary circuit of the hoist motor control device.

8. PULLEY ASSEMBLY

Used in versions with 4 rope falls, and supported by two pivots which allow it to be oriented based on the vertical axis of the rope. It is equipped with a return pulley made of carbon steel with mechanically grooved rim and turns on permanently lubricated ball bearings.

9. ANCHORAGE CROSSHEAD

Used in versions with 2 and 4 rope falls, and supported by two pivots which allow it to be oriented based on the vertical axis of the rope. The overload device is located between the plates of the beam.

8A/9A PULLEY AND ANCHORAGE SUPPORT

Used in the 6 and 8 rope fall versions, it is composed of an electric welded metal structure and is equipped with a connection plate to be positioned on the double girder trolley. It is fitted with return pulleys made on carbon steel with a mechanically grooved rim and turns on permanently lubricated ball bearings. The overload device is positioned between the support plates on the swinging beam.

10. OVERLOAD DEVICE

All DRH series electric rope hoists have an overload device with a threshold level microswitch. [RES. 4.2.1.4 - Annex I Machinery Directive]. The electromechanical overload device, constantly measures and checks the value of the load and the dynamic and inertial effects due to its movement. When the set values are exceeded the microswitch of the device starts by opening the control circuit of the hoist motor control device.

11. WEDGE ANCHORAGE

The anchorage is made of spheroidal cast iron. The minimum coefficient of utilisation is in compliance with the FEM rule 9.661/86. The rope is secured with a wedge which keeps it from unwinding.

12. ROPE

This is made of flexible steel, highly resistant to strain and wear. The minimum coefficient of utilisation has been selected to comply with the ISO standard 4308-1:2003. Non-twist ropes are used on DRH hoists with 2 falls and long (L) and extra long, 1st size (X1) drums, and on 2 and 4 fall hoists with extra long, 2nd size (X2) drums.

13. HOOK BLOCK AND HOOK

The return pulley is made of carbon steel with mechanically grooved rim. It rotates on bearing which are permanently lubricated. The load hook is made of highly resistant drop forged steel and is mounted on a swinging cross beam. It rotates on a thrust bearing and has a safety device to prevent unhooking. [RES. 4.1.2.6 - Annex I Machinery Directive].

14. FRAME FOR ELECTRICAL CONNECTIONS

Supplied upon request. It has cable intake and allows the wiring of all the connections of the electrical equipment of the hoist and electric travel trolley, if present. The compartment for the electrical connections and/or any other low voltage control equipment, is closed with a shock resistant thermoplastic cover, IP 55 protection.

15. LOW VOLTAGE CONTROLS

When the hoist is supplied complete with electric controls, the the raise and lower and/or right and left functions of the trolley are activated by electrical equipment which includes:

- The transformer for the low voltage control circuits.
- The main contactor and contactors/reversing contactors for controlling the motors.
- The fuses for protecting the motors and transformer.
- The terminal board for connections of the auxiliary and power circuits.

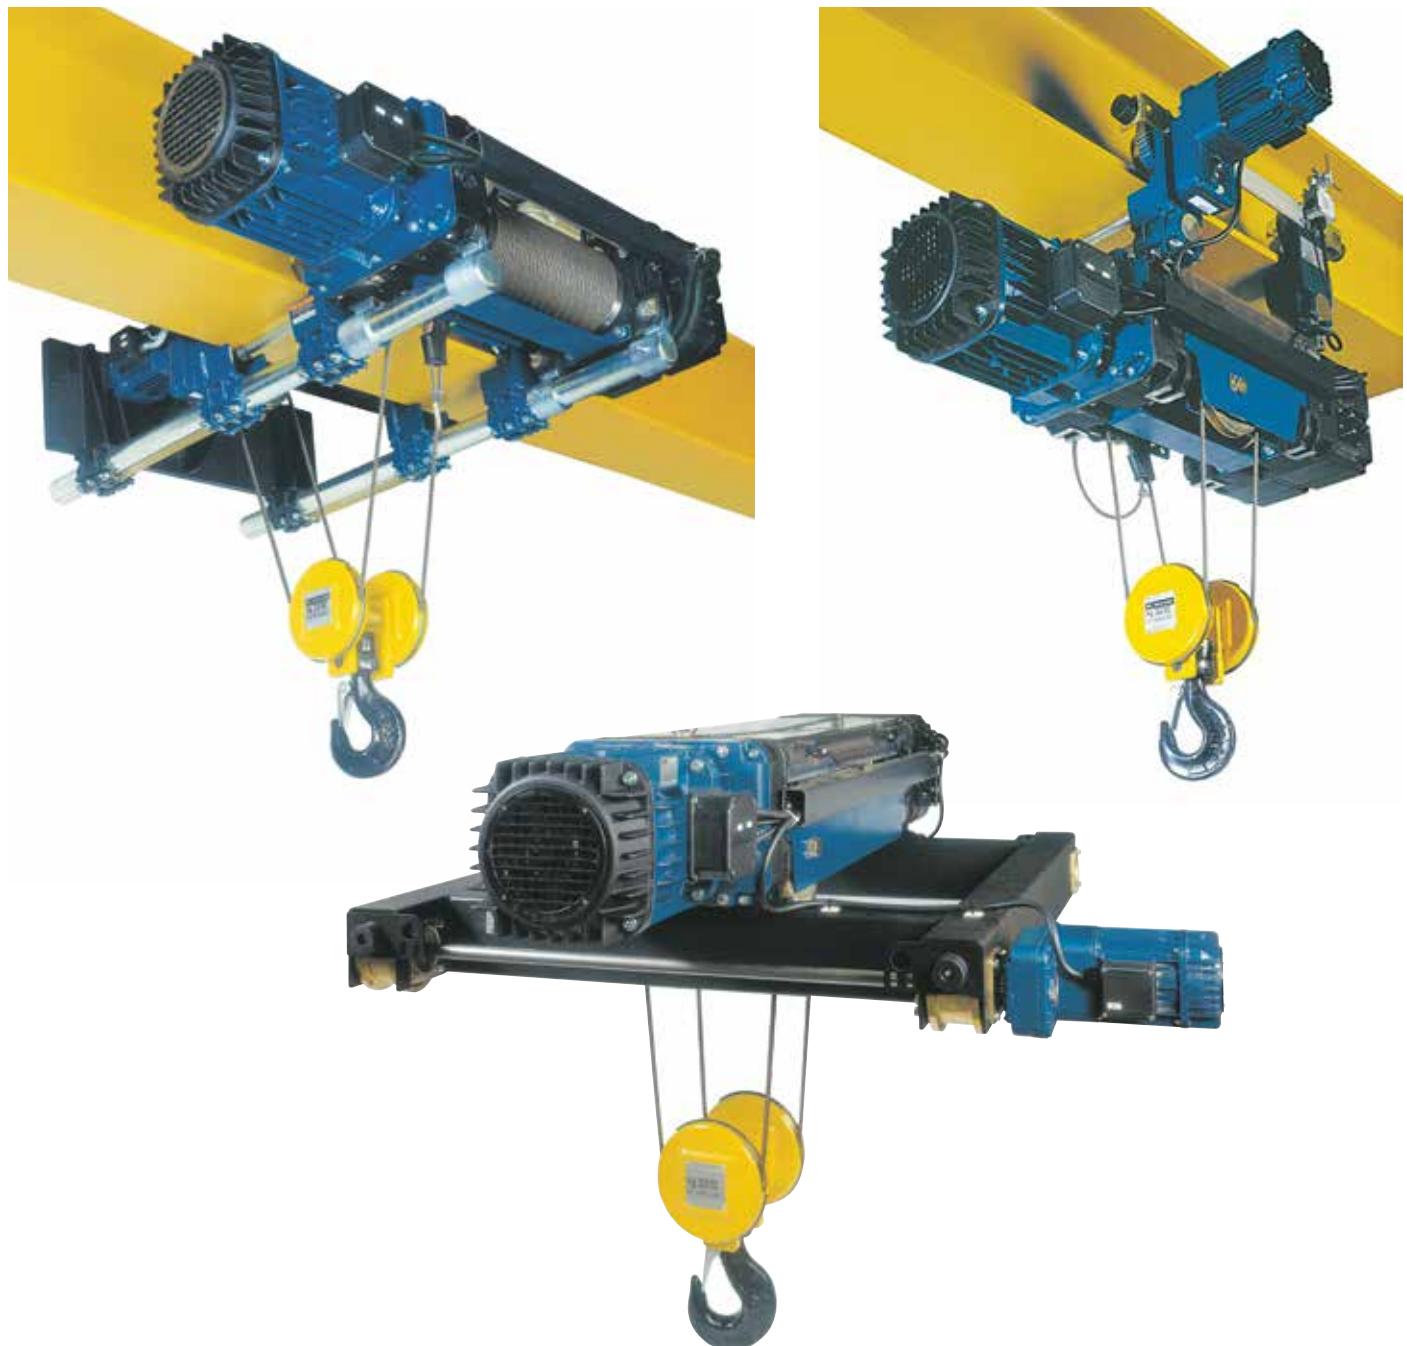

The components are mounted on a hinged panel and fixed in a compartment located on the side opposite the motor.

The controls are activated by a push-button panel supplied in AC at low voltage. The push-button panel is ergonomically shaped, watertight and made of self-extinguishing, shock resistant, thermoplastic material. Its protection level is IP 65. The emergency stop [RES. 1.2.4.3 - Annex I Machinery Directive], is activated by voluntarily pushing the mushroom shaped button, which starts the control circuit [RES. 1.2.3 - Annex I Machinery Directive].

The push-button panel is connected to the electrical equipment by a multipolar electrical cable with break-resistant metallic cores.

TROLLEYS

DESIGN AND CONSTRUCTION

MONORAIL ELECTRIC TROLLEY, TYPES DST/N - S - R NORMAL - ARTICULATED - LOW HEADROOM

These are normally composed of an idler unit and drive unit, each equipped with two wheels made of mechanically machined pressed steel and mounted on permanently lubricated ball bearings. The wheels of the drive unit are opposing, have a crown gear wheel and are connected to each other by a transmission bar in the normal (N) and low headroom (R) versions. The articulated version (S), is equipped with a double gear motor, both of which directly give the wheels the movement. The steel supporting plates have anti-derailment and anti-drop systems [RES. 4.1.2.2 – Annex I Machinery Directive] and rubber buffers. Travel is assured by one or two self-braking motors with tapered motor, progressive start up and braking, one or two speeds and one of two offset gear motors with gears with helicoidal teeth which are permanently lubricated in an oil bath.

ELECTRIC TROLLEY, NORMAL MONORAIL, TYPE DST/N

In the normal version the trolley has supporting bars with circular cross-sections that support the hoist by hinge and pin suspensions. The drive and idler plates can be adjusted along the bars in relation to the width of the running beam and are complete with brackets fitted with bolted joints. Both units, drive and idler, are connected to each other with strengthening plates.

ELECTRIC TROLLEY, MONORAIL, REDUCED HEADROOM, TYPE DST/R

In the low headroom version the trolley has supporting bars with a circular cross-section that support the hoist in standing position. The drive and idler plates are sliding and can be adjusted along the bars in relation to the width of the running beam with brackets fitted with bolted joints. The trolley has a counterbalance on the supporting bar with circular cross-section to balance the eccentric weight of the hoist.

ELECTRIC TROLLEY, MONORAIL, ARTICULATED, TYPE DST/S

In the articulated version the trolley has supporting bars with cross-sections and brackets with hinged joints which support the hoist. The drive and idler plates are sliding and can be adjusted along the bars in relation to the width of the running beam and are fitted with bolted joints. Both drive units are opposing on the same bar and are independent from the idler units.

ELECTRIC TROLLEY, DOUBLE GIRDER, TYPE DRT

The wheels, two of which are driven and two idler, are supported by a steel frame. The wheels, pressed from carbon steel, rotate on permanently lubricated ball bearings. The double girder trolley is equipped with devices to avoid derailment and dropping [RES. 4.1.2.2 – Annex I Machinery Directive] and rubber buffers. Activation of the traverse is assured by a self-braking motor with tapered motor, progressive start up and braking, one or two speeds and an offset gear motor with gears with helicoidal teeth which are permanently lubricated in an oil bath. They confer the movement to the drive wheels by a transmission bar. The hoist can be lifted on the top of the trolley or can be suspended or transversal.

TRaverse LIMIT SWITCHES

Upon request all trolleys can be supplied complete with limit switches [RES. 4.1.2.6 a) - Annex I Machinery Directive].

TOWING ARM

A towing arm is available upon request for all trolley types, adjustable in all directions, to connect the trolley/hoist to the electricity supply and prevent breakage of the conductors.

OSCILLATING BRACKET FOR HOISTS MOUNTED ON A DST/N TROLLEY

Available upon request to allow the hoist to oscillate in relation to the vertical axis of the running beam.

PERFECTLY UP-TO-DATE

ARIANNA: THE SOFTWARE THAT GUIDES MANUFACTURERS IN THEIR SELECTION OF COMPONENTS TO MANUFACTURE BRIDGE CRANES.

MAIN FEATURES

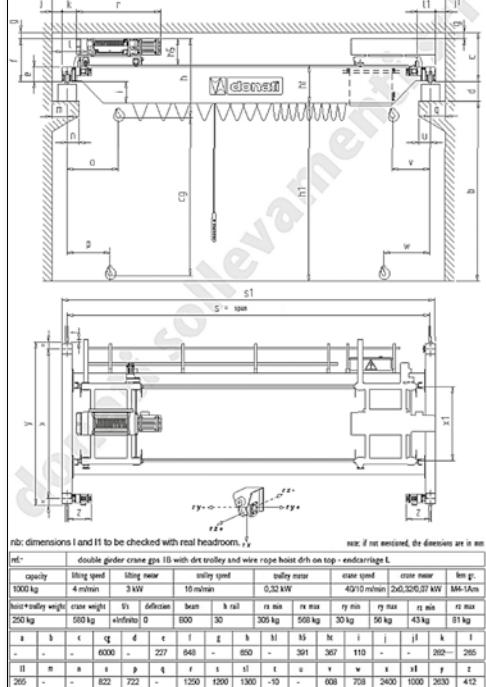

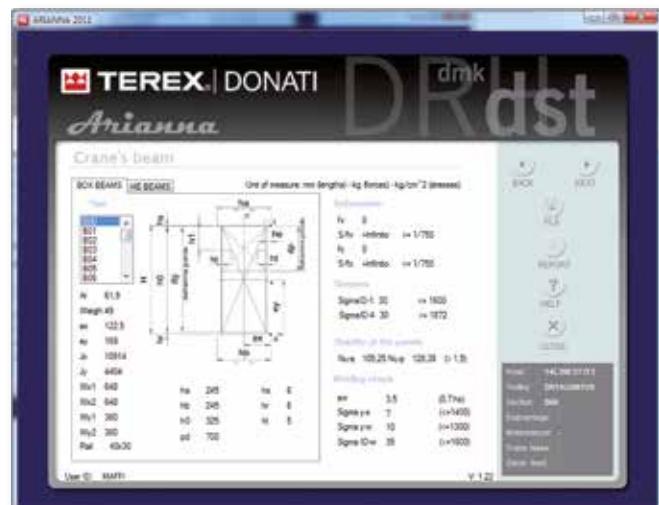

Guided selection of the more appropriate Donati products for manufacturing bridge cranes, based on the structural and mechanical requirements of the intended use environment.

By entering the following inputs:

- 1) Capacity - Gauge - ISO class and Configuration (Monorail - Double Girder)
- 2) Selection of hoist type
- 3) Selection of trolley type
- 4) Type of Beam material, desired camber (from 1/600 to 1/1000)
- 5) Selection of the Electrical Control System specifications.

The following outputs are obtained:

- Beam type (Box Beam or HE Beam) with relative dimensions and static specifications
- Head type and Gear Motor type based on speed
- Layout diagram of the installation
- List of data and codes with relative price list prices
- Possibility of creating a quotation directly in word format.

WORKS FOR YOU.

STANDARDS AND CERTIFICATIONS

DESIGN AND CONSTRUCTION

Donati Sollevamenti S.r.l.'s continuous focus on quality is not just seen in its careful designing, responsible choices and constant testing of materials, production phases and finished product. It involves the whole company through its quality assurance system which has been in place since 1993 and governs and controls the life of the entire company. The integrity in the design and production of all Donati products would not be complete without the careful consideration of the international regulatory framework and standards which are a guarantee of safety for the customer and user. In this light we recommend reading the CSA homologation of DRH rope hoists and relative accessories and trolleys built in a special execution for the North American market.

The hoists and their trolleys are designed and manufactured taking into consideration the "Essential Safety Requirements" in Annex I of the EU Machinery Directive 2006/42/EC and are placed on the market and are placed on the market and EC Declaration of Conformity, as per Annex IIA of the same Directive.

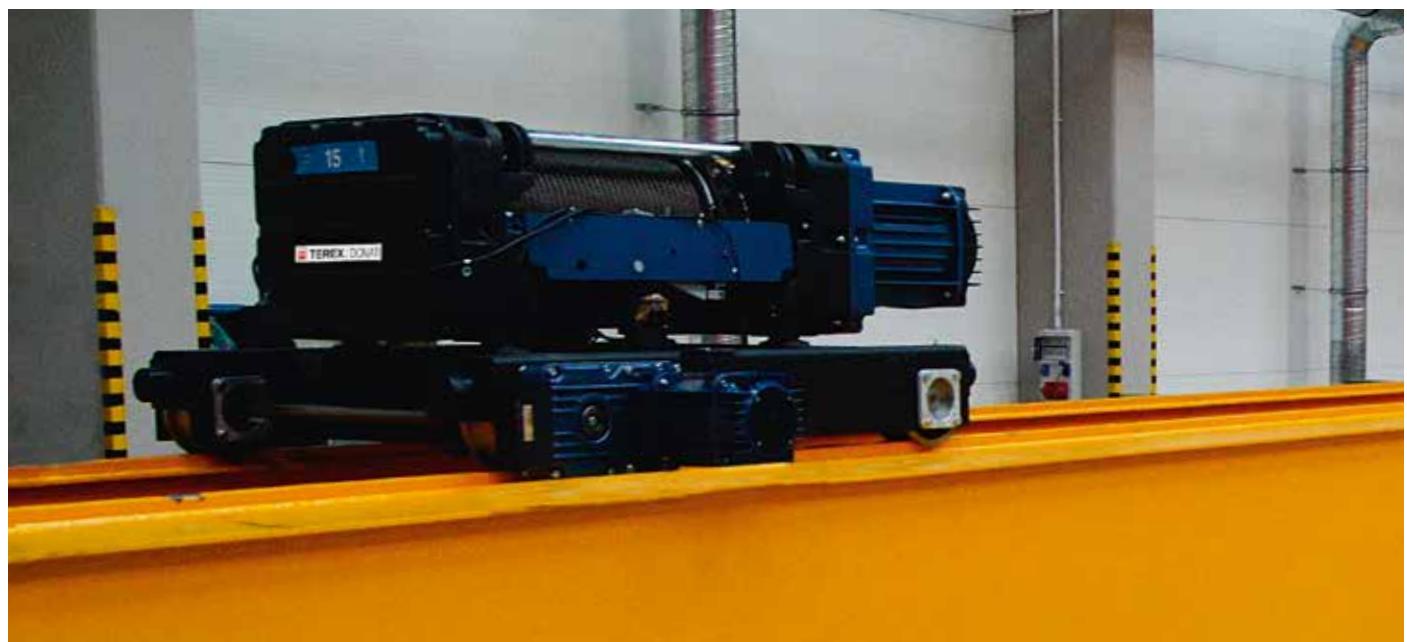

In addition, DRH series hoists and their trolleys comply with the following Directives:

- ▶ **LOW VOLTAGE DIRECTIVE 2006/95/EC**
- ▶ **ELECTROMAGNETIC COMPATIBILITY DIRECTIVE 2004/108/EC**

REFERENCE NORMATIVE FRAMEWORK

The design and construction of DRH series electric wire rope hoists the following technical standards and rules were taken into consideration:

- ▶ EN ISO 12100:2010 "Fundamental concepts, general design principles"
- ▶ EN ISO 13849-1:2008 "Safety-related parts of control systems"
- ▶ EN 12077-2:2008 "Limiting and indicating devices"
- ▶ EN 13001-1:2009 "General design – Part 1: General principles and requirements"
- ▶ EN 14492-2:2009 "Power driven winches and hoists – Part 2: Power driven hoists"
- ▶ EN 60204-32:2009 "Safety of the electrical equipment of lifting machines"
- ▶ EN 60529:1997 "IP enclosure (IP Codes)"
- ▶ ISO 4301-1:1988 "Classification of lifting equipment. General"
- ▶ ISO 4308-1:2003 "Selection of wire ropes – General"
- ▶ DIN 15401 "Choice of lifting hooks"
- ▶ UNI 9466:1994 "Shell drum. Design requirements"
- ▶ FEM 1.001/98 "Rules for the design of lifting equipment"
- ▶ FEM 9.511/86 "Mechanisms classification"
- ▶ FEM 9.661/86 "Dimensions and designs of rope reeving components"
- ▶ FEM 9.683/95 "Selection of lifting and traverse motors"
- ▶ FEM 9.755/93 "Periods of safe work"
- ▶ FEM 9.761/93 "Lifting force limiters"
- ▶ FEM 9.941/95 "Control symbols"

OPERATING LIMITS, OPERATING CONDITIONS AND LIFE SPAN

Correctly determine the operating limits of the hoist in order to ensure correct operation and duration as well as complete compliance of the operating system with the work for which it is intended.

The ISO standard 4301-1:1988 and FEM rule 9.511/86 make it possible to classify electric rope hoists based on their use and the parameters necessary for determining the limits of use are the following:

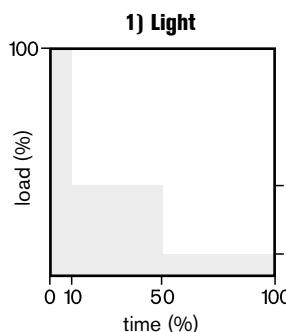

► ACTUAL LIFTING CAPACITY

This is determined by the heaviest load to be lifted

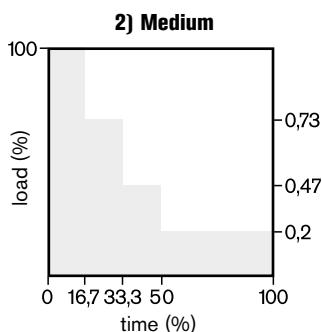

! The nominal lifting capacity of the hoist must be \geq the actual lifting capacity. Lifting capacity = kg

► THE STATE OF STRESS

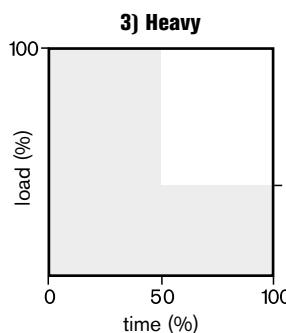

The state of stress is evaluated considering the average entity of the loads lifted and is ascribable to one of the four spectra load shown below which determine the type of service.

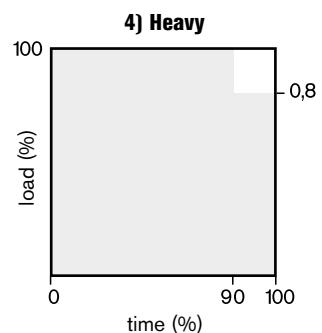

Hoists which rarely lift maximum loads but mainly reduced loads.

Hoists which lift approximately the same number of maximum, medium and reduced loads.

Hoists which frequently lift the maximum load but normally medium loads.

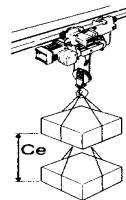

Hoists which regularly lift loads approximately equal to the maximum load.

► AVERAGE DURATION OF DAILY OPERATION

For **LIFTING** operations the average duration of operation is calculated as follows:

$$T_m \text{ (hours)} = (AHR \times C/h \times Rt) / (30 \times S)$$

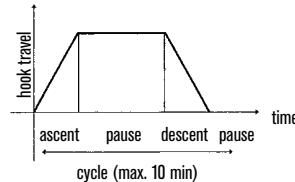

Actual hook run
AHR = m

This is the average of the actual runs of the load.

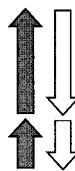

Running time
Rt = hours

Hoist running time in a whole day.

Cycles per hour
C/h = N°

It is the number of complete ascents and descents carried out in an hour.

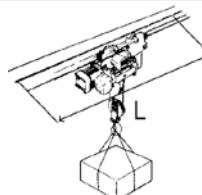

Lifting speed
S = m/min

It is the distance covered by the load in a minute.

For **TRAVEL** operations the average duration of operation is calculated as follows:

$$T_m \text{ (hours)} = (AAR \times C/h \times Rt) / (30 \times S)$$

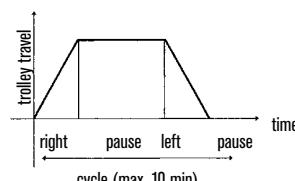

Actual average run
AAR (m) = L/2

It is the average length L of the trolley running beam.

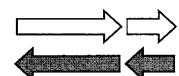

Running time
Rt = hours

It is the running time of the trolley in a day.

Cycles per hour
C/h = N°

It is the number of complete runs (right and left) carried out in an hour.

Travel speed
S = m/min

It is the distance covered by the trolley in a minute of continuous running.

WORKS FOR YOU.

SELECTION OF THE LIFTING EQUIPMENT

- According to the type of use, that determines the **stress level** and calculation of **average daily use time**, for lifting and/or travelling, the following table can be used to classify the group and the related mechanisms and select the type of hoist in relation to the **capacity**.
- Once the type of hoist is identified, it is important to check the related life in terms of hours of service and total number of cycles in 10 years of operation.

For example: Capacity = 6300 kg
 Level of stress = 2) Medium Load
 Actual hook run = AHR 2.5 M
 N° of cycles per hour = C/h 8
 Daily running time = Rt 8 h
 Lifting speed = S 4 m/min (4/1 rope falls)
 N° of working days per year = D/y 220

1) Calculation of the average daily running time:

$$T_m \text{ (hours)} = (AHR \times C/h \times Rt) / (30 \times S) = (2.5 \times 8 \times 8) / (30 \times 4) = 1.33 \text{ h}$$

In the table on page 15, in relation to the Capacity (6300 kg), at the medium level of stress (2) and at the average duration of daily operation ($T_m = 1.2 \text{ h}$) it is possible to determine the rope hoist, with 4/1 rope falls, which is:

Service Group FEM 1Am – Type DRH 24L1• M

2) Test of life span:

Hours of operation in 10 years

$$Tm \times D/y \times 10 \text{ years} = 1.33 \times 220 \times 10 =$$

2933 (hours) < of the **3200** (maximum hours possible) \Rightarrow OK

N° operating cycles in 10 years

$$C/h \times Rt \times D/y \times 10 \text{ years} = 8 \times 8 \times 220 \times 10 =$$

140800 (cycles) < of the **250000** (maximum cycles possible) \Rightarrow OK

LIFE SPAN OF THE LIFTING EQUIPMENT:

- The overall life span of the lifting equipment is determined from the **stress level**, real **hours of operation** of each mechanism and the **number of operating cycles** of the complete machine. The **operating hours** and the **number of cycles**, which depends on the lifting equipment FEM/ISO service group classification, are conventionally expected to allow safe use for a period of 10 years.
- Thus, after 10 years, the machine may have finished its expected life span, i.e. completed the available operating cycles, related to its specific service group. For this reason, when the 10th year has finished the lifting equipment **SHOULD NOT** be used unless it is inspected by **DONATI SOLLEVAMENTI S.r.l.** or by expert technicians assigned for this purpose, aimed at checking if the equipment still has some **remaining working life** and is therefore able to operate safely for an additional period of time, or should undergo a general overhaul.

! **The classification of the hoist service group is shown on the machine plate affixed to it.**

DONATI SOLLEVAMENTI S.r.l. guarantees the safe use of the DRH wire rope hoist for the entire duration of its expected lifespan, only if used in compliance with the parameters corresponding to the service group and subject to correct, regular maintenance.

Classification and limits of use of the lifting equipment electromechanisms

NOTES: For combinations with double gear motor see page 35

(1) The lifting and travel speeds and powers of the related motors refer to three-phase voltage with 50Hz frequency. They have to be increased 20% for a frequency of 60Hz.

(2) With 2 poles motors per inverter the powers are: 71-2 = 0.5kW; 80-2 = 0.8kW; 100-2 = 2kW

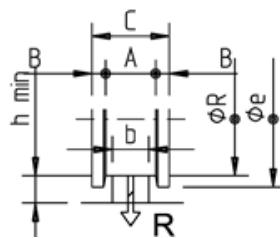

POSITION OF THE WHEELS ON THE BEAM FOR ALL DST TROLLEYS					
DST N/S R	Ø R Wheel (mm)	Dimensions (mm)	i	a	b

FIXING OF THE DRH WIRE ROPE HOISTS IN SUSPENDED AND STANDING EXECUTION

Fixing of 2 and 4 fall hoists in suspended execution:

Detail of the hole and connection area of the universal eyebolt

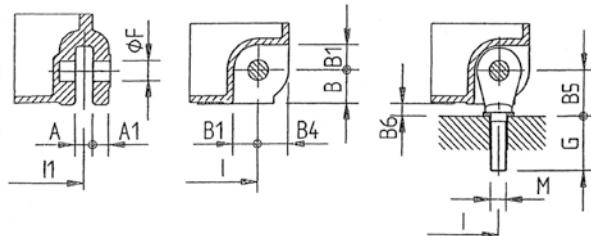

The universal eyebolt is supplied as a standard.

For dimensions I and I1 see the DRH standing/suspended page.

Fixing of 2, 4, 6 and 8 fall hoists in standing execution:

Detail of the support foot and the connection area of the universal eyebolt (2 and 4 falls) and stay bolts (6 and 8 falls)

The universal eyebolt (2 and 4 falls) or stay bolt (6 and 8 falls) is supplied as a standard.

For dimensions I and I1 see the DRH standing/suspended page.

N° of rope falls	DHR type	Overall dimensions (mm)											
		A	A1	B	B1	B2	B3	B4	B5	B6	Ø F	M	G
2/1 - 4/1	1	20	20	37	21	21	35	35	50	13	20	16x2	65
	2	22	22	42	31	31	40	40	55	13	25	20x2,5	70
	3	32	32	48	36	36	55	55	76	28	35	24x3	93
	4	42	42	60	38	46	70	70	89	29	45	30x3,5	108
6/1 - 8/1	3	32	32	48	36	-	-	-	48	-	35	20x2,5	55
	4	42	42	60	38	-	-	-	60	-	45	27x3	57

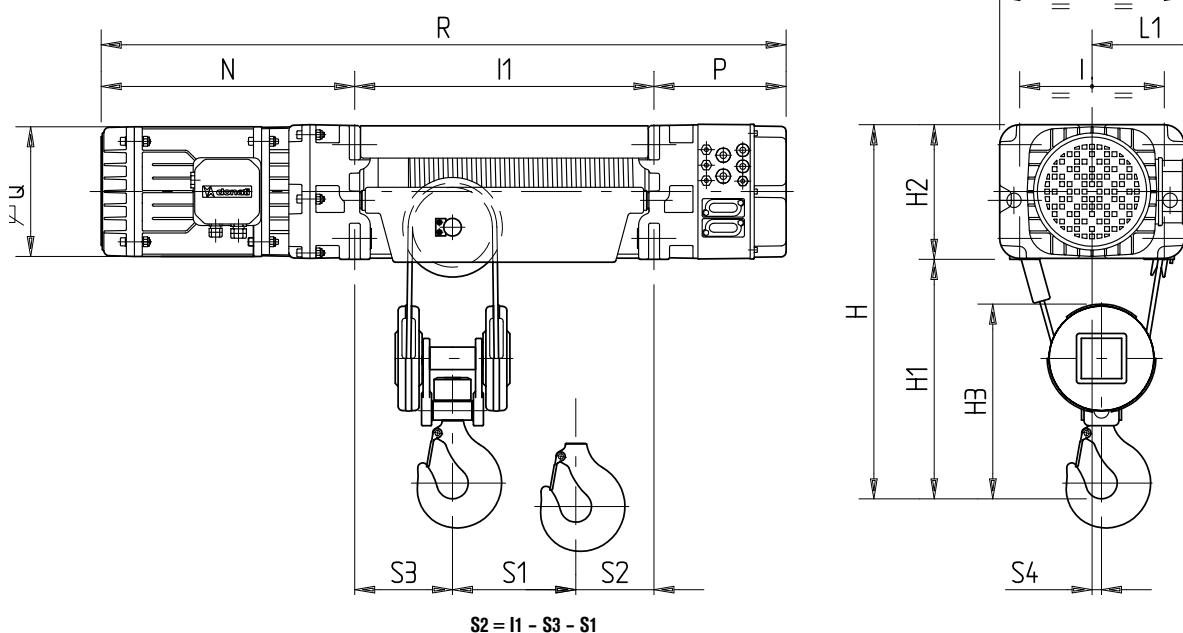

NOTES - Fixing 2, 4, 6 and 8 fall hoists in standing execution for applications on trolleys not supplied by Donati:

- With the universal eyebolt (2 and 4 falls), the headroom of the hoist (H2 DRH dimension) needs to be increased by the dimension "B6" compared to the hoist support surface.
- With the stay bolt (6 and 8 falls) the headroom does not need to be increased by the dimension "B6".

OVERALL DIMENSIONS - WEIGHTS

DRH SERIES ELECTRIC WIRE ROPE HOISTS WITH 2 AND 4 ROPE FALLS IN STANDING OR SUSPENDED EXECUTION

Reactions on the supports, see page 29

* For DRH3 and DRH4 with L.V., dimension P becomes: DRH3 = 330; DRH4 = 360

©DRH4 hoist with cylindrical motor.

N.B.: For the speed, power and dimensions of the wheels see page 18

* The trolley is made with a single gear motor (motor 100) ** The trolley is made with double gear motor (motor 80)

*** The trolley is made with double gear motor (motor 100).

- The DST trolleys articulated version are made with double gear motor. Thus the powers shown in the table need to be doubled.

* The DRT3 trolley for DRH4 hoists with 6 falls is made with double traverse gear motor.

The DRT3 trolley for DRH3 hoists with 8 falls (frame gauge 2240-2800) is made with double traverse gear motor.

Thus the powers shown in the table need to be doubled.

** The DRT3 trolley for DRH4 hoists with 4 falls, DRH3 with 6 falls (frame gauge 1200-1400) and DRH3 with 8 falls (frame gauge 1400) is made with single traverse gear motor.

*** The DRT4 trolley for DRH4 hoists with 8 falls is made with double traverse gear motor. Thus the powers shown in the table need to be doubled.
